

ISG, HOLBORN: THE POST BUILDING

The Client

ISG are a solution-focused waste removal and waste management company with a vision to become the world's most dynamic construction services company, delivering places that help people and businesses thrive.

Similarly, Encore's values align well to ISG's working ethos. Encore's innovative approach is currently disrupting traditional waste management practice by challenging waste reduction.

The Challenge

Working on a major project from November 2019- January 2021, ISG had collected over 250 tonnes of waste from a full CAT B fit out completed on a site with restricted free space.

Due to limited space on site, our client, ISG, required services specifically on a wait and load service. ISG turned to Encore and their extensive supply chain to find a waste management solution.

The Solution

At Encore, our nationwide chain of vetted suppliers, from major names to family-run SMEs, enables us to offer waste management services for construction sites and businesses of all sizes and complexity.

The exterior of The Post Building, Holborn, London

With this in mind, Encore coordinated and arranged for 600 litre bins to be delivered via our own stock, which allowed the client to easily contain waste and move it around the site.

Encore selected three local suppliers to service the site throughout the duration of the works - all completed on a wait and load basis on caged vehicles- meaning that no skip needed to be dropped on site and therefore only requiring a very small amount of space.

Encore supply each site with a fully compliant waste transfer note, in order to comply with the EA guidelines, and provided access to their own portal to download Duty of Care documents and site information in relation to each specific site.

The Results

Encore orchestrated the successful collection and disposal of ISG's waste by efficiently using our resources to ensure the requirements were met within the demand turnaround time. A total of 253 tonnes was removed, following Encore's support.

Using our extensive supply chain, our Waste Coordinators were able to work around the issue of limited space by providing our own wheelie bins and selecting trusted suppliers to service the site on a bespoke basis throughout the duration of the works.

Following Encore's procurement process, each site was assessed individually to guarantee the best procurement across multiple suppliers - resulting in cost savings for the client. By using a caged vehicle service, no permit was required which resulted in savings on site costs.

“ This project has proved to be an exciting introduction and a meaningful beginning to our work with ISG for which we are proud and appreciative. ”

- Gavin Pilcher, Encore Operations Director
